

Importation de l'image depuis le serveur NAS :

Image details

adm

Image tags

container-registry.oracle.com/database/enterprise:12.2.0.1-slim

Note: you can click on the upload icon to push an image or on the download icon to pull an image or on the trash icon to delete a tag

Création du conteneur oracle :

Name: myoracle

Image configuration

Registry: Docker Hub (anonymous)

Image\*: docker.io try.oracle.com/database/enterprise:12.2.0.1-slim

Advanced mode

Always pull the image:

You are currently using an anonymous account to pull images from DockerHub and will be limited to 100 pulls every 6 hours. You can configure DockerHub authentication in the Registries View. Remaining pulls: 100/100

Webhooks

Create a container webhook:  Business Edition Feature

Network ports configuration

Publish all exposed network ports to random host ports:

Manual network port publishing: + publish a new network port

host: 1521 → container: 1521 TCP UDP

L'adresse IP et le port d'écoute sont bon :

Start Stop Kill Restart Pause Resume Remove Add container

Created	IP Address	GPUs	Published Ports	Ownership
2023-05-15 16:27:00	172.17.0.3	none	1521:1521	administrators

```
SQL> alter session set "_ORACLE_SCRIPT"=true;
Session altered.

SQL> create user btssio identified by btssio;
User created.

SQL> grant all privileges to btssio;
Grant succeeded.

SQL>
```

Copie des fichiers dans le volume du conteneur :

Installation des logiciels

```
[oracle@fd05cd1a34b1 ~]$ cd /ORCL
[oracle@fd05cd1a34b1 ORCL]$ ls
jdk-11.0.7_linux-x64_bin.rpm          u01  u03
sqldeveloper-19.4.0.354.1759-19.4.0-354.1759.noarch.rpm  u02  u04
[oracle@fd05cd1a34b1 ORCL]$ mv jdk-11* ~/
[oracle@fd05cd1a34b1 ORCL]$ mv sqldev* ~/
[oracle@fd05cd1a34b1 ORCL]$ cd ~
[oracle@fd05cd1a34b1 ~]$ ls
jdk-11.0.7_linux-x64_bin.rpm  setup  sqldeveloper-19.4.0.354.1759-19.4.0-354.1759.noarch.rpm
[oracle@fd05cd1a34b1 ~]$ dnf install jdk-11.0.7_linux-x64_bin.rpm
```

(enfait ct sur la vm)
